

I would like for you to know that i think XM radio is the best thing that has came along for a long time. I'm not one to normally write letters of support for anything but i drive a semi and i drive long hours at a time and XM is a the only entertainment i get while driveing down the road. Not only is it entertaining it is a very informitive and important piece of equipment in my truck. It alerts me to situations that have many times saved me from long delays or potentualy dangerous situation such weather conditions, accedents, trafic jams. This kind of information on a regular radio station is hard for me to hear because i cant pull in a clear station , or at least not for very long. local weather and trafic information can provide safer driving not only for truck drivers but all who share the road.

thank you for taking the time to read and concider my views.
